Marco De Jesus

AVP, QA Automation Manager | 14+ years | W2 FTE

+1 858 933 4510 · marco_dejesus@live.com · https://www.linkedin.com/in/marco-antonio-de-jesus-ciriaco/ · https://marcodejesus.github.io/

SUMMARY

AVP, QA Automation Manager with 14+ years progressing from Java fullstack development through QA, test automation, and engineering leadership. Known for turning quality bottlenecks into measurable delivery gains — API coverage, regression time, and cost — while building teams that sustain the result.

CORE COMPETENCIES

- Quality and automation strategy at AVP / manager scope
- Measurable delivery impact (coverage, cycle time, cost, incidents)
- AI-assisted test systems that cut maintenance, not just generate scripts
- API, web, and mobile automation framework architecture
- Engineering leadership, mentoring, and cross-functional delivery
- CI/CD integration for daily / continuous release confidence

EXPERIENCE

AVP, QA Automation Manager — Axos Bank

September 15, 2026 - Present | San Diego, California, United States | W2 FTE

Technologies: Playwright, MCP, Cursor AI, CI/CD

- Promoted to AVP to own QA automation strategy beyond a single team — aligning framework standards, release risk, and engineering enablement with product delivery goals.
- Scaling the AI-assisted automation platform already proven in production (Playwright, MCP, multi-LLM workflows) so coverage and daily-release confidence hold as scope grows — without inventing a second toolchain.
- Leading automation engineers on governance, mentoring, and measurable quality outcomes (coverage, regression time, cost) rather than tool count.

Software QA Automation Manager — Axos Bank

April 2022 - September 14, 2026 | San Diego, California, United States | W2 FTE

Technologies: Cursor AI, MCP, Playwright, Ollama, Azure OpenAI

- Inherited a 6-month automation backlog with a 4-person team; rebuilt delivery with Cursor AI, Postman Flows, and MCP and moved API coverage from 40% to 95% in 4 weeks, cutting related cost ~75% and accelerating release throughput ~300%.
- Cut test-maintenance effort ~90% by shipping a multi-LLM agent flow (Ollama + Azure OpenAI) that updates tests when API contracts change instead of relying on manual rewrites.
- Collapsed full regression from 3 days to 1 hour with Playwright + MCP across web/mobile/API (~90% coverage), enabling daily releases and ~97% faster time-to-market for covered flows.
- Removed ~$50K/year of external AI API spend by running on-prem LLM containers (Ollama) for secure, domain-specific test generation under bank compliance constraints.

Sr. Software Development Engineer in Test — OfferUp

July 2021 - March 2022 | Tlaquepaque, Jalisco, Mexico | Full-Time

Technologies: Java, Rest-Assured, JUnit5, Appium

- Started API automation from zero: Java + Rest-Assured + JUnit5 framework that cut API regression time ~70% and unlocked daily CI regression.
- Extended protection to mobile with Appium (iOS/Android), reaching ~85% coverage across critical web and mobile journeys.
- Raised team code quality through training and refactoring practice, reducing technical debt ~30%.

Teacher and Mentor — QA Minds Lab

February 2021 - March 2022 | Guadalajara, Jalisco, Mexico | Full-Time

Technologies: Java, Selenium, TestNG

- Built a job-ready automation curriculum (Java, Selenium, Maven, TestNG, OOP, design patterns); within 6 months, ~80% of 50+ students landed automation roles.

Lead Software Test Automation Engineer | Software Engineering Manager — EPAM Systems

July 2019 - July 2021 | Guadalajara, Mexico Metropolitan Area | Full-Time

Technologies: C#, WinApp Driver, Azure DevOps

- Stepped from senior IC into people leadership: full life-cycle ownership for 15+ engineers and a technical development program that lifted team competency ~40% in year one.
- Delivered an 80% automation coverage desktop UI framework (WinApp Driver + C#) for Microsoft-stack apps, with reusable patterns the team could extend without heroics.

- Installed clean-code/SOLID reviews and Azure DevOps CI/CD, cutting bug rates ~25% and manual deployment time ~60%.

Sr. Automation Tester — Cognizant

December 2018 - July 2019 | Zapopan, México | Full-Time

Technologies: C#, RestSharp, Selenium

- Owned client technical delivery and team upskilling (C#, Git), driving functional testing to 100% requirement coverage.
- Ran Canary releases with RestSharp API + Selenium UI automation: ~75% API coverage, ~50% faster regression, ~35% fewer production incidents.

Software QA Analyst — Herbalife

September 2016 - December 2018 | Tlaquepaque, México | Full-Time

Technologies: SpecFlow, C#, Ruby

- Grew automation coverage from ~30% to ~70% with SpecFlow/C#/Ruby frameworks (POM, Builder) and caught 200+ defects before production; also served as Scrum Master across locations (velocity +30%).

Sr. QA Analyst — Softtek

June 2015 - September 2016 | Guadalajara, Jalisco, Mexico | Full-Time

Technologies: STLC

- Institutionalized STLC and quality practices that improved test effectiveness ~35% and cut cycle time ~25%; mentored 5 juniors to mid-level QA.

Software Tester — UST Global

November 2012 - June 2015 | Mexico | Full-Time

Technologies: Functional testing

- Led functional, accessibility, and cross-browser testing that reduced production defects ~40% — the bridge from developer into full-time quality engineering.

Fullstack Software Developer — Universidad Tecnológica de León

2011 - 2012 | León, Mexico | Full-Time

Technologies: Java, Tomcat, SQL

- Started as a Java fullstack developer building three-layer web apps (Tomcat, JSON, jQuery/Ajax) that held ~99.5% uptime — the engineering foundation behind every later automation and leadership role.

SKILLS

Top: Playwright, Test Automation, Java, CI/CD, Python

Ai Automation: Cursor AI, Model Context Protocol (MCP), Ollama, Azure OpenAI, GPT-4o, RAG, Postman Flows, PostBot

Test Automation: Playwright, Selenium WebDriver, Appium, Rest-Assured, SpecFlow, TestNG, JUnit, JUnit5, WinApp Driver

Programming: Java, Python, C#, Ruby, SQL

Cicd Devops: Azure DevOps, Jenkins, GitHub Actions, Docker, Git, Gradle, Maven

Methodologies: Agile, Scrum, BDD, TDD, SAFe, Page Object Model, Builder Pattern, Clean Code, SOLID Principles

EDUCATION

- Master's Degree in Administrative Engineering and Quality — Universidad de La Salle Bajío, A.C. (2013 - 2015)
- Bachelor's Degree in Information Technologies — Universidad Tecnológica de León (2007 - 2012)

CERTIFICATIONS

ISTQB Foundation Level Certified, SAFe 4 Agilist Certified, SCRUM Master Certified, Six Sigma Yellow Belt Certified

LANGUAGES

Español — Native · English — Native / Bilingual
